Marcos Medina

Telecommunication Engineer · Applied AI and automation

marcosmedina00@hotmail.com · linkedin.com/in/medinamarcos
Castro Urdiales, Spain (Bilbao area)

PORTFOLIO Each project in depth: architecture, decisions and results. **marcosmedina.online →**

PROFILE

Telecommunication Engineer (qualifying MSc, UPV/EHU) specialising in applied AI and automation. I build complete products end to end: design, development by orchestrating AI agents, cloud deployment and operations.

EXPERIENCE

Ausarta · Bilbao, Spain

Sep 2025 – present

Development with AI & Automation — Mar 2026 – present

AI voice agents · phone receptionists in production at many companies

- Designed, built and deployed the multi-tenant platform, which has already handled more than 12,000 calls.
- **Custom orchestration layer.** Supervises the language model in real time: it enforces each process's steps, applies deterministic rules and fails over between providers. In blind tests with real calls it gets 96% of transfers right and beats the native options on quality and speed.

NOP, a network operations platform · in production, used daily by the technical team

- Built it from scratch by directing AI agents. The team uses it to monitor every customer of the company (2,400+ routers and about 1,500 phone systems) and resolve their incidents. Nearly 700 changes shipped.
- **Centralised and automated.** What used to take seven different tools now lives in one record per customer, and many processes are automated, such as confirming outages or updating hundreds of devices at once.

Telecommunications Engineer · Networks and IP telephony — Sep 2025 – Feb 2026

- Resolved incidents across business networks and IP telephony: MikroTik, VPN, fibre and 4G, Yeastar, 3CX, SIP.

Elecnor Sistemas · Bilbao, Spain

Jun 2025 – Sep 2025

Intern · Assistant Project Manager, security systems

- CCTV, access control and intrusion projects: documentation, cost tracking and field coordination.

EDUCATION

MSc in Telecommunication Engineering · University of the Basque Country (UPV/EHU) — 2023 – 2025

Qualifies for Spain's regulated engineering profession. Erasmus+ at Jan Długosz University, Poland (2024–2025).
Thesis: 3D localisation of partial discharges with CNNs, electromagnetic simulation (CST) and SDR validation.

Bachelor's in Telecommunication Technology Engineering · UPV/EHU — 2018 – 2023

Telecommunication Systems specialisation. **Final project:** RF interference caused by high-voltage installations.

SKILLS

AI	Real-time LLM orchestration, STT/TTS, prompt and tool design, automated evaluation
Development	Claude Code, Codex and OpenCode, multiple LLMs, skills, MCP, multi-agent, AI video
Cloud	AWS (EC2, S3), production deployment and operations, monitoring, incident response
Networks, VoIP	Yeastar, 3CX, VoIP/SIP, MikroTik RouterOS (BGP, MPLS, OSPF), VPN, Fortinet, Zabbix, GLPI
Signal and ML	CNNs, electromagnetic simulation (CST Studio Suite), SDR, signal processing
Certifications	MikroTik MTCINE (2025), MTCRE and MTCNA
Languages	Spanish (native) · English B2 (Cambridge B2 First, 2018)
